

Beeswax furniture polish

Beeswax Polish is a natural wax used to feed and protect bare wooden surfaces, as well as varnished, oiled or

painted wood. It seals and protects all types of wood, giving a long lasting, durable, and natural looking shine.

Beeswax Polish will also repair minor knocks and scratches in woodwork as well as protecting from moisture and staining.

Beeswax acts as a protective coating on the surface, enhancing the wood's shine and helping keep it look better for longer.

Beeswax Polish can be used on modern and antique wood, including wooden veneers. and is suitable for treating all natural woods including Beech, Mahogany, Oak, Pine, Teak, Walnut and more.

Beeswax Polish can be used to finish all bare/unfinished wooden surfaces or even applied on top of varnish or oil finishes to add further protection and enhance shine.

It enhances the natural beauty of the wood without changing the colour. It will simply add a healthy, natural looking finish, bringing out the best in any wooden surface; modern or antique.

Our polish has only three ingredients: – bees wax, carnauba wax and natural turpentine.

Carnauba wax, also called Brazil wax and palm wax, is a wax of the leaves of the carnauba grown only in Brazil. It is known as the "Queen of Waxes" and is used in the best quality car wax polishes.

Turpentine is a natural solvent, made from distilled pine sap and this natural turpentine is what feeds your wood, helping to maintain better quality results, over and above comparative white spirit based furniture polish.

The wax is applied with a soft cloth and 200ml of the polish will cover an area of
